

Q-Write a query in SQL to list all the information of the actors who played a role in the movie 'Deliverance'.

Select actor.act\_id,actor.act\_fname,actor.act\_lname,actor.act\_gender from actor join movie\_cast on actor.act\_id=movie\_cast.act\_id join movie on movie.mov\_id=movie\_cast.mov\_id where movie.mov\_title='Deliverance';

The screenshot displays the Oracle APEX SQL Workshop interface. The SQL command entered is: `Select actor.act_id,actor.act_fname,actor.act_lname,actor.act_gender from actor join movie_cast on actor.act_id=movie_cast.act_id join movie on movie.mov_id=movie_cast.mov_id where movie.mov_title='Deliverance';`. The query has been executed successfully, returning one row of data. The results table shows the following information:

ACT_ID	ACT_FNAME	ACT_LNAME	ACT_GENDER
117	Jon	Voight	M

Below the table, it states "1 rows returned in 0.02 seconds". The interface also shows the user "Raghav Malhotra" and the schema "WKSP\_RAGHAVMALHOTRA".
